

## **D2.4 Midterm recruitment report [Confidential Deliverable]**

Submitted: November 2020

### **Summary**

This document details the midterm recruitment status for the technical validation study in the Mobilise-D project, where specifically the recruitment status and methods for monitoring recruitment will be described. Considerations due to the COVID-19 status at the sites and changes due to the pandemic are described as well, along with planned strategies to meet the target recruitment numbers.

In summary, the first participant was recruited on August 12, 2020. Status at November 15 is that 45 participants have been recruited. We aim to recruit 120 participants from five patient cohorts and one cohort of healthy adults. In order to be more flexible with the response to local lockdowns, we have submitted a request for a protocol amendment that would allow all sites to target all populations if needed. As a precaution, we have also extended recruitment until 1st of April 2021. With these changes of the original recruitment plan and end date, we expect to meet our targeted number of participants if the pandemic situation allows us to continue recruiting and testing.
