D7.3 Guidelines for Open access and Data sharing [confidential]

Submitted: March 2020

Summary

The main objectives of Mobilise-D are threefold: to deliver a valid solution (consisting of sensor, algorithms, data analytics, outcomes) for real-world digital mobility assessment; to validate digital outcomes in predicting clinical outcome in chronic obstructive pulmonary disease, Parkinson's disease, multiple sclerosis, and proximal femoral fracture recovery; and, to obtain key regulatory and health stakeholder approval for digital mobility assessment.

To address the objectives of Mobilise-D, a strategy for exploitation and translation into practice has been developed, designed to create procedures to make data, standards, and software openly accessible using FAIR principles. This deliverable (D7.3) directly addresses this aim, providing the first version of the Mobilise-D Guidelines for Open Access and Data Sharing outside the Consortium. The guiding principles to facilitate sharing and using the data outside of the consortium are set out in this document. Because the work of the Mobilise-D consortium is in its early stages, the studies and data described are under ongoing development and are therefore subject to change. The deliverable outlines the current understanding of how research data collected and generated by the consortium will be shared during and after Mobilise-D.

This deliverable (D7.3) in combination with D1.3 Mobilise-D Data Management Plan (DMP) and the Consortium Agreement provides the general framework regarding the sharing of data outside of the consortium. As the guidelines are an evolving document, they will be subject to ongoing review and update where appropriate during the work of the Mobilise-D consortium.
